As we understand that the Project is a step-by- step learning environment that closely simulates the class-room and Lab based learning environment into actual implementation. It is a project implementation at your fingertips!! An electronic, live juncture on the machine that allows you.

- ✓ Practice step by step i.e. laddered approach.
- ✓ Build a larger more robust application.
- ✓ Usage of certain utilities in applications designed by user.
- ✓ Single program to unified code leading to a complete application.
- ✓ Learn implementation of concepts in a phased manner.
- ✓ Enhance skills and add value.
- ✓ Work on real life projects.
- ✓ Give real life scenario, help to create applications more complicated and useful.
- ✓ Mentoring through email support.

We would like to send a great thank to our professor, Mr Le Thanh Nhan and others student for the adorable supports during the time in project.

Beside several mistakes we had made in the project, we hope to have more opportunities to widen our knowledge in web developing world. We also thank you so much for your information and the "demo" project from India APTECH to help us get more reality experience in this project. Since we have gained more experience from this project, we will not stop learning any thing as much as we can to be more successful in the future.

Your Sincerely,

Team Group 06.

Synposis

The Objective of this program we aim is to give a sample project to work on real life projects. These applications help us build a larger more robust application.

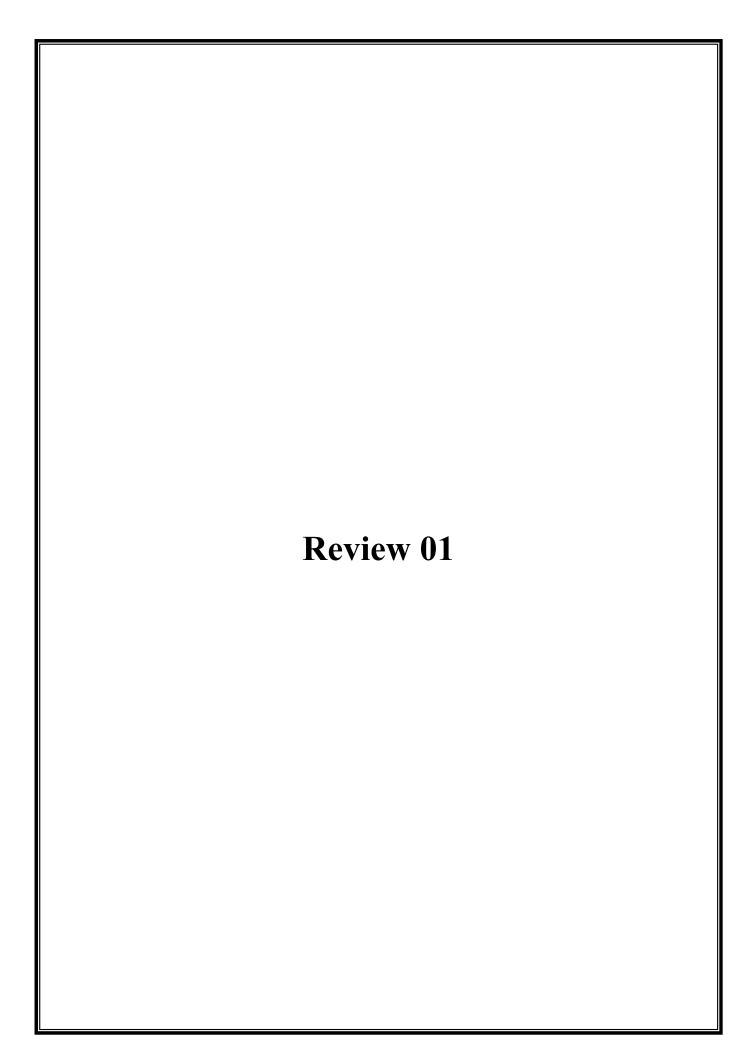

The objective is not to teach us front-end or back-end technology but to provide us with a real life scenario and help us create basic applications using the tools.

Hence, we can revise the chapters before we start with the project.

This project is meant for students like us who have completed the module of Semester II, as well as special subjects those are Java and PHP. These programs should be done in the Lab sessions with assistance of the faculty if required.

The website (in this project) is a world that brings everything about the potteries and crockeries into your experience.

It is very essential for us that will have a clear understanding of the subject. We think we should go through the project and solve the assignments as per requirements given.

Design Plan: myPC	Document Name: Problem Definition	SWD/Form No.01/PD/Ver1.0
Effective Date:	Version 1.0	Page No: 1 of 48
21/03/2023		

Problem Definition

The development of Information Technology and Internet help users access information, communication, transaction or shopping are so easily. With the rise of technology, Electronic Commerce has become a way to carry out the business transactions faster, more convenient, reduce cost for maintenance and employees.

With the price increment of products with the technology development, we bring to the customer a competitive environment to get the product with lowest price. We sell genuine products, computer components and electronic equipment imported from foreign units at reasonable prices.

Based on the need stated in the Project Overall, we design an application that will provide the key features and functionalities as the followings:

- ✓ Provide function for member register.
- ✓ Provide information of the product to customers and members.
- ✓ Provide shopping cart function so customers and members can order products.
- ✓ The member can take their privacy through Member Control Panel (MCP)
- ✓ Receive comments from customers and members to improve service quality as well as product quality.
- ✓ An Admin Control Panel (ACP) that support about management system:
- ✓ Administrators the ability to add, update product information quickly and accurately.
- ✓ Administrators the ability to manage members and their feedback, comment or rating.
- ✓ Administrators the ability to manage delivery progress belong to orders.
- ✓ Administrators the ability report statistics.

Customer Requirements Specifications

The Role of User and Admin:

1. User:

- ✓ Can register as a member and manage personal account.
- ✓ Can view and buy products.
- ✓ Can view their orders.

2. Administrator:

- ✓ Can add / edit / deactivate products and categories.
- ✓ Can view customer's information or deactivate an account.
- ✓ Can view all orders and approve orders.
- ✓ Can view report statistics.

Describe the points in the data processing cycle for each user object.

User:

Input:

- Member registration data.
- View product's data.
- Order selected products.

Process:

- Search products from database by categories, by product types.
- Process customer registration information.
- Process customer orders.

Output:

- Notification of successful registration / failure.
- Product information.
- Notification of successful making orders.

Webmaster:

Input:

- Administrator login data .
- Product and category information to add / edit / delete.
- Member data to be search / delete.
- Order data to be search / approve.

Process:

- Add / edit / delete products.
- View information of all members.
- Change member account's status.
- View all orders.
- Update order status.

Output:

- Notification to add / edit / delete products success / failure.
- Notification to change member account's status.
- Notification to update order's status
